100 PERCENT COMPATIBILITY!

**Our SAP® connector for Microsoft SharePoint® Server will add additional features to be able to use your SharePoint® System as SAP® Content Repository.**

Archive your documents easy, flexible and fast with SAP® and SharePoint® Server. Customer specific meta data and index information can be saved within Sharepoint and can be written into seperate lists or into the related document library.

· Save SAP® attachments easily in SharePoint® as Archive backend
· View and Search your SAP® documents in Sharepoint®
· Flexible Customizing of the target document library in SharePoint®
· Compatible with other CaRD Tools, like the CaRD Scan Suite
· SAP® is the leading system for processes and attaching documents
· Existing customizing, developments and processes can be integrated
· Generic Object Services (Attachments) and Document Info Records (Originals) are supported
· Meta-Data can be transferred to SharePoint as separate list or as part of the document library and can be customized

SHAREPOINT® REPOSITORY FOR SAP®

You can define your own document types and customize your business objects for the Sharepoint repository.
